DISSONANCE USERS FEEDBACKS AND IMPROVEMENTS

TOTAL NUMBER OF USERS'S REVIEWS	8

All users experienced Dissonance with the Meta Quest 3 in standalone mode with handtracking, at 3 different locations and roomscales (L3mxW2.9m, L3mxW2.8m, L3.5xW3.2m). Their walkthrough was followed via the headset's mirror mode showing what the user was seing inside the headset. Real-time observations were made for their movement in the roomscale area and for their hand gestures when performing the interactions. Oral assistance, position replacement and hand gestures's help were given when needed. Following the experience, a feedback discussion, scene by scene, was held about their impressions, each trouble they encountered and their improvement suggestions.

O.Nguyen

Scene	Topic	User's Feedback	Dev's Observation	User's Explanation	Dev's Issue	Improvement
SC00 Startup						
	Grab Red scrunchie timing	Was doing the gesture at the same time as the gesture was explained to her.	Grabbed scrunchie before instruction dialogue was given.	After grabbing the briefcase handle, intuitively knew to do the same gesture to grab scrunchie.	Interaction from user was performed before the wait interaction signal from the timeline of grabbing the scrunchie. When arriving at that time signal, same gesture was not performed again, so timeline kept waiting.	Remove the dialogue audio clip giving the instruction of grabbing the scrunchie being played by the timeline to Scene Audio signal instead to play independently of the awaited interaction.
	Red scrunchie fell under the table		Dropped the scrunchie outside of the case passing through the table. As the room is too dark, lost it on the ground.	Did not know where to drop the scrunchie.		Add a collider on the surface of the table in addition to the bottom of the case containing the scrunchie.
SC02 PhoneBus						
	CoinSlot too small	Difficult to insert the coin inside the coinslot.		The coinslot is too small compared to the coin size. Was unsure whether to put the coin deeper in the slot or just drop it.		Scale up the 3D model of the coin slot.
	Phone keys pressing movement not visible	Did not see the phone keys moving back and forth when pressing/poking it.		Does not know if the phone key was correctly pressed or not.		Increase the Press Movement delta value along the X axis.
	Phone keys sound too low	Does not hear well the sound when dialing the numbers.				Increase the volume of the audio clip for the phone keys.
	Difficult to grab the coin when falling on the ground	When failing to insert the coin, accidently dropped the coin on the ground. Could not easily pickup the coin from the ground.				Increase the cabin floor collider height slightly above the floor level.
	Cannot read the PhoneCall poster	Call instructions and Police number was too blurry and almost unreadable.		Was unsure about the police number and tried to check but could not see the number properly. Attention was focused on the above poster with other unrelated big numbers written and distracting from the tiny police number written at the bottom of second poster.		On poster texture, rewrite sharper text and increase max texture resolution allowed from 4096 to 8192 pixels. Texture's resolution is 4160 x 6240 pixels.
SC03 House						
	Detect User too far from the car zone		User entered the trigger zone in front of the car driver's window too far.	Did not know where to go.	User should be physically standing close to the car (near the roomscale's right border). If user is too far from the car, in the next Appartment scene, instead of being close to the window, user will be near the sofa and mispositionned.	Reduce the size of the trigger zone collider to be detected closer to the car.
SC04 Appartment						
	Sienna's photo too dark	Didn't recognize who the person was in the picture.				Increase photo's texture luminosity.
	Not looking at calendar in details	Looked at Rose date birthday but not the black cross out text corresponding to Sienna's death date.		Text was not visible enough.		Make red date darker for more visibility.
SC05 HotelLobby						
	Explore the scene beyond the stairs area			Wants to explore beyond the hotel stairs by curiosity.	User reached the roomscale's front limit.	Move the suitcases and the rack closer to the counter to act like obstacles and dissuade user to move beyond.
	Not ringing the bell			Was unsure of what to do once in the hotel lobby.	Ring the bell interaction starts the dialogue between Clerk and Rose.	Add a dialogue at the beginning of the scene mentioning to ring on the bell to call the staff. "Hmm, il n'y a personne. Où est le personnel? Espérons que cette vieille sonnette marche encore."
SC06 HotelRoom Blind						
	Confused in the complete dark	Was unsure why it was all black and if it was normal or not.		Didn't understand the dialogue from Rose with "Pas mal le cache-yeux, non?". Not sufficient to link this to the fact of not seeing anything. First time only heard sounds but didn't pay attention as to where the objects heard were placed.		Change the dialogue to be more explicit "Pas mal le cache-yeux non? Cela te permettra de faire une sieste pendant que je finis mes affaires." indicating that the user is on the bed waiting.
	Did not hear the curtains sound					Increase volume of curtains audio clip.
SC07 InterrogationRoom return						
	Point at photo instead of touching		When hearing dialogue to show photo "Montrez-moi laquelle de ces chambres porte le numéro que nous cherchons", was pointing at the photo with finger at distance.		Intend to not use far-interaction raycast detection for more realism when interacting with an object. Handtracking configuration to select an interactable is set to near-interaction and enter trigger zone when hand is on top of the photo.	Change dialogue to touch the photo instead of showing it "Touchez la photo".
SC08 HotelRoom						
	Not grabbing sticker note and read it from afar	Saw the sticker note on the bed and read it standing above it.		The note was written big enough to read it standing without the need to pick it up and bring it closer.	Grab the sticker note is an awaited interaction from the timeline.	Reduce sticker note size and hence, the letters size, to force picking the note up.
SC09 ForestTrail Murder						
	Flashlight not visible	Did not see the flashlight so did not pick it up.		The color of the flashlight handle is too dark in the already dark forest. The forest was clear enough to wander around without the need of the flashlight.	Wait interaction to grab is needed to activate first teleport zone of the forest trail.	Change the flashlight material to a brighter gray color, and direct the beam towards the user to spot it more easily. Increase the intensity of the environment fog to make the forest appear even darker and encourage user to pickup the flashlight.

	Trail Signs at two pathways not clear	The wood pannel arrows did not exactly coincide with the pathways on the ground.		Did not see the splitting pathways because did not look on the ground. Only looked up at the arrow pannel which appeared like pointing at a tree instead of the pathway.	The teleportation zone collider is placed on the pathway ground to teleport user to next zone at parking.	Modify trail sign 3D model to match the arrow orientation with the pathway.
	Not knowing to enter the car once at the parking	Saw the car but didn't know if should interact with it.	User was standing in the parking without moving or going to the car.	No indication on what to do once in the parking. Did not know when to be only a viewer or when to become active and perform an interaction.	User needs to enter the car and be sitted because next scene starts with user sitted in the car while driving.	Add a dialogue saying to shelter from the rain "Il pleut, manquait plus que ça! J'vais aller m'abriter dans la voiture."
	Not enough space to open car door and get in	Struggled with getting into the car because the door was not opened enough.	At that moment, user is at the roomscale's bottom left corner and has little space to open the car door.		Since most of the scenes take place in front of the chair and not behind hit, any user movement around the chair or close to the roomscale back limit is a bit tight.	Roomscale's dimensions of 3 square meters was already optimized as the minimum floor surface to play. But a larger space would be more confortable if real installations allow it.
	Not grabbing the car door by the handles	Did not see the car's door handles to open it because it is too dark with the overall color of the car.	Difficult to grab, did not seem to know where to grab the door.			Brighten car's material color and handle's collider size.
SC10 ForestRoad Murder						
	Eye level too low when driving	Did not see the road, sitting height too low in driver's seat.	User started to stand up even though the car was still driving.	Wanted to see the road but the wheel was blocking the view.		Increase camera Device height and camera offset.
	Always see the same trees when driving			Not natural to see the same trees over again looping.	To ease standalone quest performance, limited the number of trees in scene to not exceed too much mesh triangles rendered.	No change for now. Loop the same portion of the road and placement of trees despite redundancy.
	Two trees weirdly peeking through the road	When driving and when car has stopped and Rose has walked away. Strange looking to see two trees way too close to the road, with leaves surpassing the road.			Compromised made to hide Rose animation being stopped since timeline has paused when waiting for interaction to grab sunshade. If not hidden behind trees when pausing, user would have seen Rose stopping at some point, completely stiff while timeline was waiting interaction. Since Rose also needs to stay on the road to later be hit by the car, she could not initially walk inside the forest, off road. Part fix was to make Rose stop stiff behind the trees.	Since this issue challenged the main timeline-interaction based architecture, in future projects, make some animations independant from the timeline to avoid animations being held back by timeline or have to hide characters.
	Forget instruction to grab the sunshade	Heard to grab the sunshade but as the dialogue continued, then forgot to grab it and confused it with grabbing the rearview mirror.		Sunshade too dark, not visible.		Change to brighter inside car color.
	Grab letter through sunshade directly	Grabbed the letter prior to grabbing sunshade and opening it to discorver the letter.	User hand went through sunshade and managed to reach the letter's collider, bypassing opening the sunshade first.		Grab sunshade signal is waited before grab letter signal on the timeline.	Only activate letter after action sunshade grabbed performed.
	Not understanding murder intention in first scene version	In first version (murder), thought it was an accident and not an attempt of murder to hit Rose with the car.		The main character's voice was not angry enough to make his intention clear of wanting to hurt Rose. Looked more like he was looking for her instead of chasing her.		Add a dialogue from the main character with aggressive words stating he is angry at her after finishing reading the confession letter. "Non! C'est pas possible! Comment t'as osé lui faire ça?! Tu vas me le payer!!" Change audio of car start by a louder and quicker sound. Add audio of car accelerating.
	Car break sound heard too soon	Should hear the break sound after hearing hit sound.		Not logic to hear the break sound before hitting Rose if the intention was to kill her.		Move Break sound after hit sound.
	Not going out of the car to see Rose after hit impact	After hearding dialogue "Qu'ai-je fait", did not open the door car and go out to see Rose.		Was a bit shocked after the impact and stayed sitted.		Add dialogue for the main character to go check on Rose "Je devrais aller voir si elle est..."
	Not going close enough to Rose laying on the ground	Once getting out of the car to check on Rose, opened the car and stood there without getting closer to her.		After hitting her, felt scared and hesitant to go immediately too close to her.		Increase trigger zone detection to cover a larger area between the front of the car and the door.
SC11 ForestTrail Accident						
	Walk diagonally off trail at Zone 1	After grabbing the flashlight, walked diagonally to join the trail path and missed the teleportation area of zone 1.	Continued to walk forward but missed the teleportation zone.		If user misses first teleportation point or is at extreme limit, the next teleportation points that the user will be spawned at will be offset and user risks to go beyond roomscale's limits.	Enlarge the first teleportation zone area to cover the sides of the pathway to detect user more easily if he deviates a bit.
	Enter at two pathways trigger zone too soon		User has entered correct area on the left path, but teleportation to next area was not triggered and user kept walking around in Zone 4.		Initially thought teleportation zone area was too small and did not detect user correctly. Then thought user's spawn point at beginning of zone 4 was too close to the teleportation area and already activated when teleported. In fact, the time between the end of the dialogue and wait interaction signal was too far inbetween and user after finishing dialogue was already heading towards correct path before timeline reached signal.	Move the wait interaction signal of teleportation Zone 4 right after the dialogue finishes.
	Not understanding why there is a bloodpool	Did not understand the purpose of the bloodpool on the ground spreading on the former parking right path of first scene version.		Did not make the link between blood here and the intent of murder from the other scene version.	Initial intent of the blood pool was to remind that this path was leading to the murder version where main character intendend to kill Rose on the road.	Since link with the other scene is too tricky, remove completely the bloodpool to avoid scenario confusion.
	Close car door pivoting too far inside		When grabbing car door, kept holding door's handle to open it. Continued grabbing while entering car. Since the door followed the hand, once sitting inside car, the hand was close to the body and the door was unrealistically inside the car.		Normally when opening the door, it is made in two times. First grab then open door wide enough, then let go of handle. Enter the car. Sit, then grab again inner door's handle and close the door. Did not program a pivoting angle limit to prevent door pivoting too far.	Later update add door rotation limit angle.
SC12 MountainRoad						
	Mountain fog is too white	Fog is way too luminous compared to the grey clouds.				Change fog environment color to a darker gray.
SC13 ForestRoad Accident						
	Not looking inside the sunshade for the second scene version	Did not intuitively look into the sunshade at the second scene version.		Just looked at Rose walking away. Without a dialogue telling to look at sunshade, without instruction, did not want to look into the sunshade even though the scene config is similar to the first version.		Add dialogue to look inside the sunshade.
	Grab photo in sunshade too soon	Once hearing dialogue to look into the sunshade, immediately looked inside it without waiting Rose walking away like in first version.		Already knew from first version that there is something in the sunshade, curiosity makes user to look into it much quicker.	User grabbed sunshade before wait interaction signal and before Rose going pass the trees which hides the character's animation being stopped by the timeline pausing while waiting grab sunshade interaction.	Remove grab sunshade interaction signal to make it optional to grab the photo or not for the second version.

	Photo of the 3 characters seems like Rose was not in good terms back then			Seeing Rose standing apart from the 2 others made user think that she was already mad at them in the past.		Change memory photo to put Rose between her brother and Sienna.
SC14 Hospital						
	Not looking behind to see through the door		Stayed sitted looking straight forward without following the inspector going out of the room.	Thought the inspector was going out for a bit then coming back again after a while. Was not worth looking at him behind. The room is very dark and the attention is focused on the ceiling lamp light on the table.	User misses Rose in the wheelchair and the appearance of the red scrunchie indicating the correct version of facts.	Add a light source through the door's window on the floor reaching the user's chair to direct the focus more towards another source of light.
	Not seeing Rose's red scrunchie in the wheelchair	Only saw Rose's face but not her red scrunchie.			If Rose animation moves too much forward, does not see the animation of her turning her head towards user. If she is way back, does not see the scrunchie.	Make Rose move a little further to see the scrunchie.
	Not making the connexion between red scrunchie and which version was true	Only seing a scrunchie is not enough to understand that this is the key detail between two versions.		Did not pay attention at the red scrunchie in Forest trail and Forest Road murder version.		Make the scrunchie more visible or add another detail to show difference beween two versions.

TL.Nguyen

Scene	Topic	User's Feedback	Dev's Observation	User's Explanation	Dev's Issue	Improvement
SC00 Startup						
	Not enough time to read rules	Did not have time to read the form rules.				Space out the timing of dialogues between grabbing scrunchie inside case and instruction to read the form.
SC01 InterrogationRoom Intro						
	Background music too blank	Miss immersive music to create a mysterious atmosphere at the beginning. Repeat this same music each time user back to interogation room			Only add impact music at first scene, later interrogation scenes contain a lot of dialogues to listen to and music would be too disruptive.	Add music at first interrogation room scene intro.
SC02 PhoneBus						
	Not seeing Police 17 number right away	Did not recall police number at first.		Searched for police number but was distracted by the big numbers on the above poster, thought those numbers were a different clue or a riddle to solve. Did not get interested in tiny writings on the lower poster.		Change first poster to a Drink add to avoid misleading fake numbers.
SC03 House						
	Not understanding where to go	Unsure what to do at the beginning of the scene.		Was not guided, but nothing happenned since both Rose and Sienna were sitting idle in the car. After a moment, started to look around if there is something to do. Tried grabbing car handle. Maybe one of the woman was supposed to get out or main character get in. And surrondings was quite vast, no angle hinting a clue on what to do.		Add initial dialogue from main character to guide towards car's door to initiate Sienna's dialogue. "Je devrais aller la dissuader de conduire avant qu'elles ne partent."
	Trouble distinguishing Rose and Sienna voices	When Rose and Sienna were discussing, was hard to differenciate who said what because their voices are too similar and the lips were not moving.			Lips movement while talking was not implemented because lip's bones on 3D model's rig were not on every character's model. As it is too long to learn to implement it, decided to skip it for now.	Try modifying Sienna's voice to differ more from Rose's. Change Sienna because she has fewer lines in the scenario compared to Rose. Other generated voices were too robotic. Decide to keep Sienna's original voice.
SC04 Appartment						
	Look at calender briefly without noticing dates details	Looked only briefly at the calendar without seeing in details Rose birthday's date or the black cross out date from Sienna's death date.		Saw calendar but many other objects were also interesting to look at. Knew at some point though that the calendar might be a clue.	Dates are an optional clue for later scene forest trail corresponding to the kilometer road marker and the trail sign number.	Make Calendar dates bigger.
SC05 HotelLooby						
	Stiff animation from Rose at the beginning	Got scared by Rose standing there looking at main character without moving.				Add a standing idle animation for Rose before she moves towards counter after ringing bell interaction.
	Clerk character too tall	Clerk looked too tall compared to main character (user's eye level) and Rose.				Scale down Clerk's height.
	Roughly press bell to ring		Instead of gently tapping tip of the bell with the finger, smashed the whole bell with hand palm.	Was a little rough, but no need to adjust the size of the bell.		
	Not going to sit down at red sofa	After clerk said in dialogue to go sit down while waiting for him to find a solution, Rose went sitting down but user stayed standing.		Once hearing to sit down, saw Rose sitting down but user just did not want to sit down at that moment.	If user does not sit down, will cause issue next scene where user starts scene sitted.	Add dialogue from Rose to tell user to sit down. "Allez! Viens t'asseoir."
SC06 HotelRoom Blind						
	Not hearing Rose's voice well	Did not hear the word "cache-yeux".		Was unsure if it was normal to be in complete darkness. Real physical room surrounding were quite noisy due to traffic.		Increase headset's volume when experience takes place in a noisy environment.
SC07 InterrogationRoom Return						
	Trouble differenciating curtains sound from coat hangers	2 room photos had similar objets. Chose correct one with luck because was unsure of the placement of the curtains and hangers.				Increase the sound of the closet to differenciate both sounds.
SC08 HotelRoom						
	Not standing up to grab sticker note		Picked up the sticker note while sitting and just bended torso forward to reach note and grab it.	Sticker not was close enough to reach it without having to stand up. Go straight to easier movement.	User must stand up for next scene Forest Trail.	Put sticker note far away at the edge of the bed to make the user difficult to reach it just by sitting on the bed.
SC09 ForestTrail Murder						
	Flashlight physically unreachable		Could not grab flashlight which was behind the roomscale's back limit (inside the room physical wall).			Bring flashlight a little more forward and distant from the back limit.

	Difficult to maintain grabbing flashlight		Ungrabbed by mistake flashlight because fingers were not stable enough for hand tracking.			Add to rules to gently maintain fingers's positions when interacting.
	At two pathways, go wrong path	At trail sign for both pathways indicating either parking or Lake, user chose to go to Lake pathway instead of parking.	User went very far to the roomscale's bottom right corner. Was supposed to be going to Zone4 teleport area which is around mid center of the roomscale slightly right off.	User did not see the painted arrow on the parking wooden sign. Saw only the word parking but chose Lake's path because thought there were more clues this way to discover.		Make painted arrow more visible.
	Want to drive and turn the wheel	Instinctively wanted to grab the wheel to drive the car.				Later update, add interaction to drive the car.
	Inside car not realistic enough	Suggested to add the warning lights on the dashboard				Later update change car dashboard texture to add warning lights. Same goes with the car mirrors (currently blank).
	Sound not different enough from first murder version	Add a crow's sound in this version or any animal sound to add up to the fearful environment on top of the creepy forest music.				Add animals sounds in the forest.
SC10 ForestRoad Murder						
	Rose's size too big compared to main character			Rose was too high in the car and seemed bigger than when she was in the hotel lobby. She is main character's little sister, so it is strange to see her bigger than him.		Scale down Rose's size in ForestRoad scene.
	Not hearing sound when Rose was hit			Without hitting shock sound, unsure why, and if the car actually hit the body. Impact sound was not strong enough. Felt car acceleration and understood main character's intention to kill Rose but it ended with a low hitting sound that was not satisfying.		Increase hitting sound.
	Not wanting to go out of car after hitting Rose		After hitting Rose, user stayed sitted in the car without attempting to open the door to get out of the car.	After hitting Rose, was still in a shocking state. And the main character's voice to tell to check on Rose was too blend to transcribe the urge to go out and see what happened.	User needs to be standing up for next scene back to Forest Trail. The lack of emotion from the main character's voice comes from the dialogues generated by AI's voice design from Kikivoice. This tool was chosen because of its free use both by pricing and license. Emotions and tones on this tool are available but were trained on English speaking models. When trying to apply on French texts, a strong english accent were put on french words.	Voice over dialogues by real actors instead of Ai generation would be better.
SC11 ForestTrail Accident						
	Not understanding the impact sound during transition from second path to parking	Did not know what was that sound and got confused.		During the black transition, because of those impact sounds, thought there was something to listen to again with clues, same as the blindfolded scene in the HotelRoom.	Initially, those impact sounds were intended to indicate a different version from the murder one since the pathway to the parking is different.	The sounds's purpose are not understood. Decide to remove this transition and impact sound and make same simple fade transition as the first version is enough.
SC12 MountainRoad						
	Sienna's and Rose's voices difficult to differenciate					Same problem as SC03 House, but Sienna's original voice remains.
	Sienna's foot not on top of the car's pedal			Feeling of both danger and fun seeing Sienna's foot not aligned with the pedal, being on the side.	Animations are all from Mixamo's free website. Driving animation was set with the foot on this position. Tried to adjust car size and pedal's position with Sienna's height to get her foot as close as possible to the pedal. Did not have time to modify driving animation itself.	Later update, correct driving animation in Blender for the foot on pedal and also hands on the wheel.
	Missing crash sound of the accident			Wanted to hear the crash sound of the car.		Add crash sound during the fade.
SC13 ForestRoad Accident						
	Grab photo directly before sunshade		Reached for the sunshade to grab it but directly grabbed the photo instead.	Initially intended to grab the sunshade but the photo came along.		Adding collider on shunshade does not block hands (which don't have personnal colliders).
	Rose going through the trees after getting out of car			While loop driving, those two trees were very noticeable since they were positioned too close to the road and tree leaves extend too much.		Same issue pointed in the narrative-interaction architecture when animation is paused by timeline while waiting interaction.
	Not hearing crash sound after break			Since the character's voice are blend, adding more immersive sounds make it impactful.		Add hitting sound even for the accident version after break sound.
	Photo too blurred	Did not completely recognized the characters on the picture.				Increase photo's resolution and quality.
SC14 Hospital						
	Not looking behind to see through the door		Stayed sitted looking straight forward.	Did not turn head to follow inspector because thought he would come back with a coffee and just waited. Heard the nurse talking but did not see her, so let them speak and thought he would come back after discussing. Also turning back on the chair like that is unpleasant. Did not want to turn head to that point and keep staring behind.		Increase inspector footsteps and voice sound towards the door. Turn the ceiling lamp down. Place Nurse's character close to the door. Add dialogue to turn and see what is going on behind. "De quoi parlent-ils derrière?"
	Not understanding that Rose was in a wheelchair			Impression of Rose rolling on something but did not recognize the wheelchair's sound. Thought it was a scary sound, and maybe Rose was a ghost back to haunt him after the killing attempt.		Change door with a wider window to make the wheelchair visible.
	Not making the connexion between red scrunchie and which version was true			Red scrunchie color was not remarkable enough to notice it during Forest Trail and Forest Road in murder version. Red is vibrant but it is only just a scrunchie. Clothes were quite neutral as well.		Add a dialogue in the Murder version to point at the scrunchie saying Rose is wearing one now. "Tu as vu? Je me suis acheté un petit chouchou, il te plaît?"

G.Lamard

Scene	Topic	User's Feedback	Dev's Observation	User's Explanation	Dev's Issue	Improvement
SC02 PhoneBus						
	Grab phone while sitting in bus stop, arm going through cabin's window		Reached and grabbed the phone inside the cabin while remaining sitted at the bus stop bench. Arm crossed through the glass window.	Did not understand to call, explored the map, tried taking the phone to see what happens.		Add dialogue to go to the telephone cabin. "Je devrais aller à la cabine téléphonique et appeler les secours".
	Trouble opening phone cabin door		User made the grab gesture at the door handle really fast and failed to grab the handle at multiple attempts.		Hand tracking did not catch up fast enough user's gesture and lost fingers tracking.	Write in rules to perform a stable and controlled speed gesture to enable proper hand tracking.
SC03 House						
	User not detected properly in car zone		User was probably already in the trigger zone when spawning in the scene.		Zone trigger was not detected at the right time of the timeline.	Adjust trigger zone area to prevent early detection.
	Not understanding where to go			Discovered the map, did not really know what to do first.		Add dialogue to get closer to the car.
SC04 Appartment						
	Hesitant to move around the room		Hesitated to explore the room.	Lots of objets in the room, scared to move too far and bump into a real physical object.		Would be more confortable in a roomscale with larger space free of any objects.
	Look at calender briefly without noticing dates details			Lots of objects to see on the ground, lost focus on calendar. But interesting to put useless objects to mislead user.		Make Calendar dates more bigger.
SC05 HotelLobby						
	Character's animations too old looking				Rigging and self-animating takes too long.	More realistic animations would be better.
	Not going to sit down at red sofa			Instruction to sit was clear but since Rose already went to sit, thought one person out of the two was enough so did not want to sit down and expected cutscene would continue anyway.		Add dialogue from Rose to tell user to sit down.
SC06 HotelRoom Blind						
	Scene's length a bit too long		Got a bit impatient while just waiting and listening during the scene.	Found it daunting when had to replay the scene when getting the wrong photo during interrogation.		Reduce the blank between objects's sounds and cut a bit the bath's sound length.
	Not recognizing spatial ambisonic sound	Did not pay attention at where the objects were located, only focused on recognizing what object it was.				Increase objects sounds.
SC07 InterrogationRoom Return						
	Touch photo too quickly		Touched the photo with the tip of the finger but removed it really quickly.		Programmed a delay of detecting sthe selection of the photo object to prevent chosing a picture by mistake.	Adjust the delay of hovering interaction from 3s down to 2s.
SC08 HotelRoom						
	Not standing up to grab sticker note			User was a bit lazy so if can catch the sticker note while sitted, no reason to get up.		Put sticker note far away at the edge of the bed to make the user difficult to reach it just by sitting on the bed.
SC09 ForestTrail Murder						
	At two pathways, not knowing where to go			Did not see the painted arrow on the wood sign below parking. Saw also that the lake path was longer and parking closer, so chose parking.		Make painted arrow more visible.
	Want to drive and turn the wheel	Instinctively wanted to grab the wheel to drive the car.				Later update, add interaction to drive the car.
SC10 ForestRoad Murder						
	Grab sunshade too soon	Grabbed the sunshade but did not see the letter inside.	User grabbed the sunshade while Rose dialogue was still playing.		Grab sunshade interaction was detected before the timeline wait interaction signal. It is possible to grab the sunshade but the letter is ony activated and visible after the signal of grabbing sunshade succedded at a given point of the timeline.	Add in rules to wait for a dialogue or an npc animation to finish before starting to perform an interaction.
SC14 Hospital						
	Not looking behind to see through the door			All the times user went back to interrogation scene during the experience, he has looked behind but there was nothing to see. So last time returning to interrogation room, did not look behind because thought there was still nothing there.		Increase inspector footsteps and voice sound towards the door. Turn the ceiling lamp down. Place Nurse's character close to the door. Add dialogue to turn and see what is going on behind. "De quoi parlent-ils derrière?"
	Not making the connexion between red scrunchie and which version was true			A scunchie is too random, not noticeable enough on its own without especially noticing it.		Add a dialogue in the Murder version to pointat the scrunchie saying Rose is wearing one now. "Tu as vu? Je me suis acheté un petit chouchou, il te plaît?".

C.Viehofer

Scene	Topic	User's Feedback	Dev's Observation	User's Explanation	Dev's Issue	Improvement
SC00 Startup						
	Grab Paperform instead of touching it.		Tried grabbing the paper on the table.	More natural to take it than touch it or hover it.		Add a dialogue to maintain hand over the paper.
SC07 InterrogationRoom Return						
	Stand up to see the distant hotel room pictures		Stood up from chair to see the hotel room pictures that were more distant.	Did not see properly enough so tried getting closer.		Bring the 4 pictures closer to the edge of the table near the user's chair.
SC09 ForestTrail						
	At two pathways, chose to go to the Lake instead of the parking		Walked into the Lake direction before going to the other way at parking.	Previous scene sticker note indicated to go search for Rose at the trail, so thought to go look for her and continue on the trail rather than quitting and go to parking.		Add dialogue to go check at the parking if the car is there.

SC11 ForestTrail						
	Teleportation Area Zone 1 offset the rest of user positions outside boundaries		Second time in trail, walked more confidently and faster in the forest without stopping at black fade in transition in first teleportation area.		At first teleportation area Zone 1, user walked beyond the teleportation zone while transiting to the next teleportation point, resulting in walking too far up to the front roomscale's limit. At second path, user was too close to the limit so by trying to reposition user back to roomscale, used the controllers to move user. But it created an offset when switching from handtracking to controllers resulting in the XR Rig offset in world space as well as the height of the headset virtually which was around 1m below the normal view. Following scenes were all offset because of that in Forest road and Mountain Road, user were outside of the car instead of the driver's seat and in Hospital final scene was spawned in the hallway instead of inside interrogation room.	Bring the first teleportation area Zone 1 closer to the middle of the roomscale and smaller teleportation area collider on the path's direction.

SC00 Startup						
	Not seeing lightswitch			Room was dark and lightswitch not visible enough.		Change material emission to a brighter white.
	Rules not visible enough			Rules writing was too blurry.		Increase letters sharpness for the texture.
SC02 PhoneBus						
	Hesitate to stand up and go to the cabin		Stayed sitted for a while at the bus bench looking around without knowing to go to the cabin by standing up.	Dialogue "Je devrais les appeller" not intentional enough. Lets more open choice to not do the action.		Change dialogue to "Je dois les appeler".
	Not recognizing the coin			Only saw a flat round but "5 Francs" stamp was not visible enough to indicate it was a money coin.		Modify coin texture to have more shadows around the engraving.
	Not thinking of paying to call		After grabbing telephone, went straight to press number buttons and did not grab the coin to insert in coin slot.	Unsure if in the phone cabin era, emergency calls were free. So no need to pay.		Add dialogue to remind to pay, add a small bip toner after grabbing telephone stating to insert coin to be able to call.
SC10 ForestRoad						
	Letter upside down when grabbing with left hand		Grabbed letter in the sunshade, but the back was showing upfront instead of the writing.	User is right-handed. But in real life when driving, right hand is usually busy with handling the gear shift, so drivers uses left hand for other actions. Also the user spawn point while sitted in the driver's seat is slightly bit offcentered to the right leaving more space for the left arm to move.		Later update: detect right or left hand and change attach point of the letter in order to always grab it with the correct orientation.

SC00 Startup						
	not enough time to read the rules			Did not see the rules clearly, wanted to grab the paper to take it closer to the eyes but did the hover interaction instead before finishing reading. Did not hear the dialogue to touch the paper.		Add more time between grabbing the red scrunchie and reading.
SC02 PhoneBus						
	Grab cabin door with whole fist closing		Used all fingers closing whole fist to grab the door instead of pinching with thumb and index.		Handtracking camera sensors lost track of the fingers's joints and could not recognize the default grab gesture with thumb and index.	More visible photo on paper rules showing correct grab gesture.
	Trouble grab cabin door handle at the tip		Tried opening cabin door by the edge of the handle at the corner.	Wanted to open the door in the most natural way.		Extend collider of handle to cover whole handle. Currently too centered inside.
	Not pressing OK after the 17 numbers pressed			As Police 17 is a reserve special number, normally should not have to press OK additionally.	OK button was already on the texture of the 3d model of the cabin so integrated the OK validation when defining the call sequence.	Younger generation is accustomed nowadays to always have to validate after a choice, so OK remains.
SC03 House						
	Opencar door instead of going on the driver's window side		Tried grabbing car back seat's door handle to open it.	The dialogue stating "Dissuader" induced user to stop the car from leaving more vigorously.		Change dialogue to "Parler" only.

SC02 PhoneBus						
	Difficult to insert coin in slot			To insert coin, more usual to have the coin slot vertically instead of horizontally. Since the slot was in another direction, did not know it was the slot for coins.		Change direction of the slot vertically.
SC03 House						
	Not seeing Rose and Sienna in the car			Car windows were too opaque, could not distinguish people inside.		Change glass material transparency.
SC04 Appartment						
	Sit on the chair sofa		Sat on the sofa for a bit before getting up.	Was unsure where to go. Saw the sofa really centered in the room, thought maybe it would initiate a dialogue. Once sitted, saw the calendar and went up to look at it.	Sofa is positionned at the real physical chair spot in the roomscale to prevent user to walk through it and bump into it. But next scene is hotel lobby where user starts scene standing in the lobby so he cannot be sitted in previous appartment scene.	Rotate the sofa a bit towards the wall and add a bag on the sofa to block sitting surface to help dissuade sitting.

SC05 HotelLobby						
	Want to sit at Rose's red sofa instead of dedicated user one		Went towards Rose's chair and bumped into Rose's animation walking.	Right after hearing from the clerk dialogue to go sit while waiting, went straight to the closest sofa which was Rose's chair.		Speed up Rose animation to go sit faster at her chair.
SC07 InterrogationRoom Return						
	Two hotel rooms photos on right side of table too dark			Did not see properly the two photos on the right because ceiling lamp light was not lighting the right corners enough.		Recenter the pictures closer to the light spot.
SC09 ForestTrail						
	Not paying attention to the flashlight	Did not pickup the flashlight.	Went behind the kilometer marker to search for clues.	Did not understand why flashlight was needed and looked around the marker for other objects.	Normally behind the kilometer marker is the road and corresponds to the roomscale back limit.	Add a dialogue to notice the flashlight. "...au moins elle a eu la bonté de me laisser une lampe-torche.".
SC10 ForestRoad						
	Grab sunshade before wait interaction signal		Grabbed sunshade right when Rose said to look into it.		Did not wait for the end of animation or dialogue and started performing interaction before requested at specific time of timeline.	Rules to wait for interaction or dialogue to finish before beginning an interaction.

SC00 Startup						
	Not enough time to perform interactions	Was a bit rushed between instructions and performing interactions.	Was still doing an interaction when next dialogue instruction was given.			Space the dialogues with the waiting signal a bit.
SC02 PhoneBus						
	Coin bouncing back and falling on the floor	Difficult to insert the coin in the slot.	Took 3 attemps to put the coin inside the slot and picked it up from the floor when falling.			Change to vertical coin slot for easier insertion.
